

**IHCAS has donated \$40,000 to STARS Shock Trauma Air Rescue Service Foundations for the purchase of 8 Cardiac Monitors**

From STARS: "Cardiac monitors are the most important piece of equipment on board a STARS helicopter. Cardiac monitors are used on every patient flown by STARS. This vital piece of equipment monitors a patient's heart rhythm. This is a critical piece of information needed by our crew when transporting a patient and is relayed to the accepting hospital. The new monitors will be more durable, meet standards of care related to CPR feedback and ultimately provide more detailed and accurate information."
